

## Shrinking switch mode power supplies raise density and reliability

**The introduction of a new ultra-miniature series of switch mode power supplies from PowerPax UK sees high capacity power supplies become even more compact without diminishing their performance or reliability.**

As all types of equipment inevitably gets smaller with each new generation that is launched, PowerPax ensures that its power supplies stay in step by shedding size and weight while increasing the continuous output power capability.

By reducing component count and leaning more heavily towards a 100% surface mount process, price is also reduced to provide customers with that all important competitive edge. The miniature ranges all boasts a wide range input (90-264vac), full international safety approvals, short-circuit protection, over load protection and over voltage protection as well as high MTBF figures.

The ranges are as follows:

ACSD Range 11 – 25 watt

ACMD / ACMC Range 25 – 50 watt

ACML Range 35 – 70 watt

ACLG Range 80 – 90 watt

ACHG Range 90 – 120 watt
